

Urgent Request to Alleviate Medical Care Shortages

The increase in the number of people infected with COVID-19 is putting a strain on the healthcare delivery system and having a major impact on emergency medical services, **making it impossible to save lives that could otherwise be saved.**

We strongly request the cooperation of all prefectural residents in receiving **appropriate medical care** in order to alleviate medical care shortages.

● **For those with a low risk of severe illness, please self-test with at-home antigen test kits**

※ If you test positive, please use the Positive Patient Diagnostic Center (those who are 13 to 64 years of age, have no risk factors for severe illness, and have mild symptoms)

● **Visit medical institutions during the daytime on weekdays when possible**

※ Please call in advance for a consultation

● **Use ambulances and visit the emergency room only when truly necessary**
