

Driving in the snow!

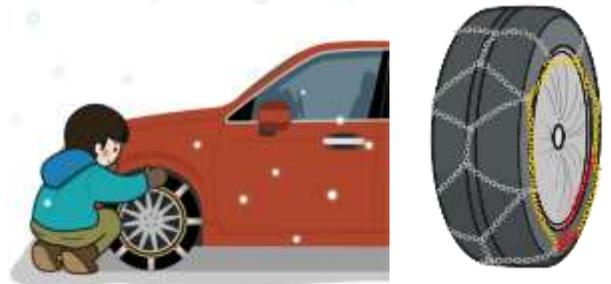

What will you do then??

Things you need to know!

What to do when driving on snowy roads.

Check road and traffic conditions in advance by checking the Japan Road Traffic Information Center website.

Snowy and icy roads are slippery, so use tire chains or snow tires, slow down, and keep a safe distance from other vehicles.

Skidding is common, so be especially careful when steering and braking.

Never make sudden starts, sudden braking, or sharp turns.

Whenever possible, try to drive on a tire track already traveled by other cars.
